

Sun Outages Spring 2023

From February 28th to March 9th, 2023 you may experience interruption in TV Service from an astronomical phenomenon called sun outages. A sun outage is an interruption in satellite signals caused by interference from solar radiation. The interference is caused when the sun is in direct line with a communication satellite and the sun's radiation overwhelms the satellite signal.

How long do Sun Outages last?

Effects to TV service due to sun outages can last between 10 to 20 minutes a day. They occur between Noon & 6PM in our area.

Can Sun Outages be Prevented?

Unfortunately, there is technically nothing that can be done to prevent sun outage effects.

How do they affect watching TV?

During this time, you may experience interference with picture quality and sound when watching television or IPTV. You also can experience channels going off with the messages of "Video Signal has been Interrupted", "One Moment Please", or "This Content Cannot Be Played".

Sun outages do not affect internet, phone service, or Video On Demand. Please see below for a full schedule of sun outages by Channel and approximate time of occurrence.

If any group of channels is affected for more than 20 minutes, or if all channels are affected at one time, there may be a problem that is unrelated to sun outages. If you need assistance, please contact us.
